

Vesicare™ exerts greater selectivity for urinary bladder.¹

Data adapted from Ohtake A et al.¹

In animal model: anaesthetized female rats (in vivo).

* ID₅₀ is the dose required to induce 50% inhibition of the baseline carbachol response.

 Vesicare™ has greater selectivity for urinary bladder than for the salivary gland compared to tolterodine, oxybutynin and darifenacin.¹

 89% of patients do not report "dry mouth" by Vesicare™ 5mg.²

Taking the Urgency out of their lives:

Prescribe VESICARE™
